

Dear Doctor

I must advise you, that I only recommend and I can only stand behind the original Plaquex product. Generic compounds tend to contain a lower grade phosphatidylcholine raw material. The main reason for this is that the lower grade raw ingredient is cheaper. This can be very dangerous to your patients. They cause dissociation of the deoxycholic acid from the phosphatidylcholine and this leads to thrombophlebitis, hemolysis, causing kidney damage and death. This has happened to patients using generic PC products.

Do not let a pharmacy representative convince you that the generic compound is identical to Plaquex. They like to sell generics because it is cheaper for them to make and they don't have to pay a license fee. The safety of your patients and your license to practice are more important than any financial consideration.

For the safety of your patients I strongly recommend that your order only the original Plaquex I.V. from Anazao Health and not a generic phosphatidylcholine compound. Canadian colleagues can order the original Plaquex from Pure Integrative Pharmacy in Vancouver, B.C.

When ordering, clearly state you want the original Plaquex and when the vials arrive at your office, make sure they are labeled with the trademark Plaquex.

Thank you for your attention to this serious matter.

Anita Baxas,MD
